UOFIP\_Factoids.docx

Dee –

I've started a document where we can track the facts/numbers we use in our talking points, briefing papers etc. to ensure we are being consistent and using accurate descriptions of the numbers ... see attached for rev.0.

Not sure what a "factoid" is but it sounded more fun than facts & figures.

I've stored this doc at: I:\Restricted Share\U&O FIP\Technical Support Documents

Dee – following our conversation on the phone ... I'm building a summary "Factoid" document we can all refer to in our effort to describe numbers we use more accurately. It'll be your Christmas present.

### **Uinta Basin Air Quality Background:**

High ozone levels have been observed over the last few years at numerous air monitors (tribal and state) in the Uinta Basin during winter inversions (as high as 134 ppb in 2013 – AQI very unhealthy context) ~928% of all VOCs and ~5560% of all NOx non-biogenic emissions released in Uinta Basin, which mix to form ozone, are from oil and gas production sources – it is estimated that ~8075% of those emissions sources are on the Reservation. There are ~6,40010,000 existing oil and gas wells producing on the Reservation basin that pre-date NSPS OOOO and so are without federally required emission control.

### **Ozone NAAQS:**
